9 Remove plastic packaging from **take-out meals**

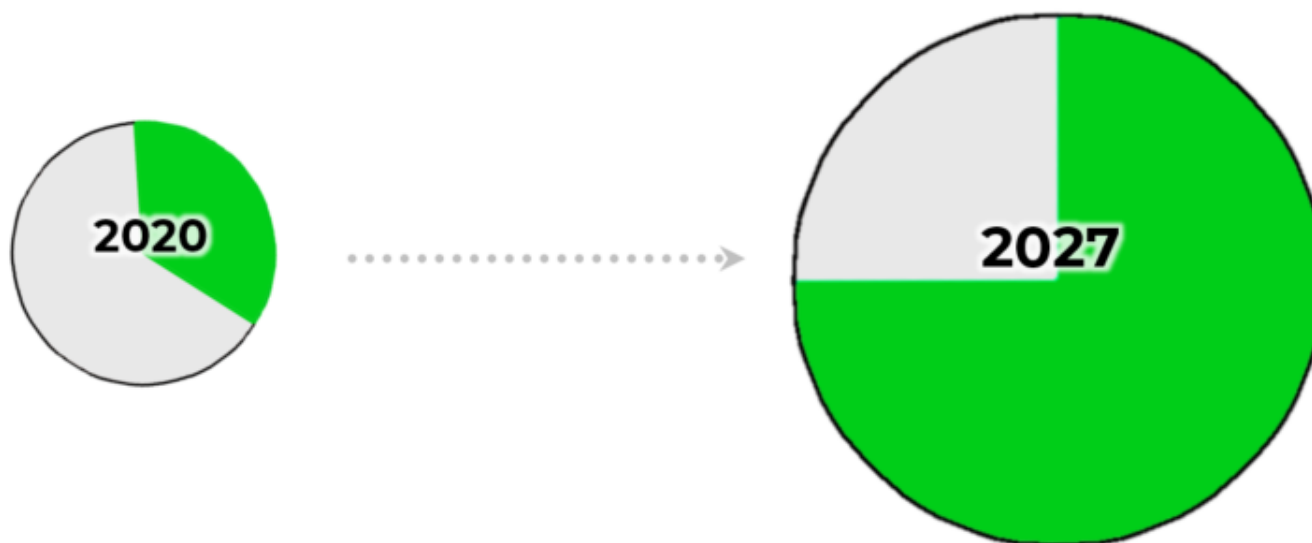

Paris Sustainable Food Plan : Our goals

Consumers' training : Home-cooked meals & Children involvement

Paris Sustainable Food Plan : objectives

From 35% to 75% organic food

Our advocacy activities with french cities to unleash the potential of public procurement

For a proactive European food policy, let's free up public procurement and put the European regulation on sustainable food systems back on the agenda

*The transformation of agricultural and food models is a strategic **challenge we need to address to guarantee food security in Europe and the resilience of our territories**. Every citizen wants access to **sufficient, healthy food from an early age**. While the European Union aims to improve its capacity to face crises, European policies are insufficiently coordinated to achieve these objectives.*

We, local authorities, economic stakeholders and associations, are committed every day to supporting the best farming practices using public catering, the setting up of logistics platforms and processing tools, food education, land and water management policies as a lever. From Ghent to Milan, Copenhagen to Paris, European cities are getting involved.

*However, the legal framework is restrictive and ill-suited to the implementation of such local policies and practices. Promoting the diversification and relocation essential to building more resilient territories takes years. **We cannot wait. By 2040, the European Union could lose 6.4 million farms, down 62% on 2016¹.***

Merci
